Advanced Diagnostic Testing

Total Eyecare the first practices in New Jersey to offer new technology revolutionizing the standard of eyecare.

The **Daytona** has the ability to scan the entire eye in a fraction of a second with an intense bright light with **NO** need to use burning, blurring eye drops. It detects the earliest signs of blinding eye conditions such as retinal tears and detachments.

The **OCT** is the equivalent of an MRI of your eye. We can see down to the individual cells in the retina. It allows the doctors to detect the earliest signs of diabetes, glaucoma, macular degeneration, coronary artery disease, both eye and brain tumors, high blood pressure and more.

The **Specular Microscope** scans individual cells in the clear cornea and allows the doctors to treat many of the “unknown” reasons for glare and poor vision quality.

NO BLUR, NO DROPS & BETTER CARE.

Advanced Diagnostic Testing can cost up to \$300. We only charge **\$49** for the cost of use.
